Car Sharing Web Application Instructions

Step 1: Navigate to the source directory and open a terminal such as PowerShell on Windows.

Step 2: Run the application by entering the following command

./gradlew clean bootRun

Step 3: Proceed to the final step at the end of this document for preconfigured login details.

To access the application on a device other than the one it is running on, such as a mobile phone or tablet, you must retrieve the running device's IP address. On Windows, this can be done by typing entering the command ipconfig in the terminal. (add image highlighting this)

On Linux, this can be done by entering any of the following commands:

- ip addr show
- hostname -I

Final Step: Once the application is running, enter the following URL into your browser:

http://localhost:8080/

You can access the application with preconfigured accounts with or you can complete the registration process.

NOTE: registering a new account will only allow you to access user features.

The details for the preconfigured accounts are provided below:

ROLE	EMAIL	PASSWORD
USER	bob@bobmail.com	password
ADMIN	smithy@mail.com	password2
